Sequence 8287, Application US/09543681A

Patent No. 6605709

GENERAL INFORMATION:
APPLICANT: GARY BRETON

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRAB

TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: US/09/543,681A

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT FILING DATE: 1999-04-05

PRIOR FILING DATE: 1999-04-05

PRIOR FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344

LENGTH: 203
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LOCATION: (14), (15), (16), (17), (18), (19), (20), (21), (22), (23), (24), (25), (26) LOCATION: (27), (28), (29), (30), (31), (32), (33), (34), (35), (36), (37), (38), (39) LOCATION: (40), (41), (42), (43), (44), (45), (46), (47), (48), (48), (48), (50), (51), (52) LOCATION: (53), (54), (55), (56), (57), (58), (59), (60), (61), (62), (63), (72), (78) LOCATION: (79), (89), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (80), (8

Sequence 10. Application US/09198452A

Patent No. 655224

GENERAL INFORMATION:

APPLICANT: GTIffais, R.

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering or INVENTION: and treatment of infection

TITLE OF INVENTION: and treatment of infection

TITLE FERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

NUMBER OF SEQ ID NOS: 6849

SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-252-991A-18874

Publication No. US20040031072A1

GENERAL INFORMATION:

APPLICANT: La Rosa Thomas J

APPLICANT: Zou Vinua

APPLICANT: Car Yongwei

TITLE OF INVENTION: Soy Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement

FILE REFERENCE: 38-21(5323)B

CURRENT APPLICATION UNDMER: US/10/424,599

CURRENT PILING DATE: 2003-04-28

NUMBER OF SEQ ID NOS: 285684

SEQ ID NO 246855

LENGTH: 344

TYPE: PRT

                                   Sequence 4, Application US/08579823A

Patent No. 6080409

GENERAL INFORMATION:

APPLICANT: Ruegg, Curtis L.

APPLICANT: Wu, Hongyu

TITLE OF INVENTION: Immunostimulatory Composition and Method

NUMBER OF SEQUENCES: 10

CONRESPONDENCE ADDRESS:

ADDRESSEE: Dehlinge Ave. Suite 250

STREET: 350 Cambridge Ave. Suite 250

STREET: 350 Cambridge Ave. Suite 250

STREET: 350 Cambridge Ave. Suite 250

CONTRY: CA

COUNTRY: USA

ZIP: 94306

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OPPERATION SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION NUMBER: US/08/579,823A

FILING DATE: 03-DEC-1998

GENERAL INFORMATION:

APPLICANT: Cheever, Mary L.

APPLICANT: Disis, Mary L.

APPLICANT: Disis, Mary L.

TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/NEU PROTEIN

TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE

TITLE OF INVENTION: HER-2/NEU ONCOGENE IS ASSOCIATED

NUMBER OF SEQUENCES:

CORRESPONDENCE ADDRESS:

ADDRESSEE: Seed and Berry

STREET: 6300 Columbia Center, 701 Fifth Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 ELTYLPTNASLSFLODIQEVQGYVLIAHNOVROVPLORLRIVRGTQLFEDNYALAVLDNG 120

Sequence 68, Application US/08466680B
Patent No. 6075122
GENERAL INFORMATION:
APPLICANT: Cheever, Martin A.
APPLICANT: Cheever, Martin A.
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/new PROTEIN
TITLE OF INVENTION: PR. 2/new ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 69
CORRESPONDENCE ADDRESS:
ADDRESSEE: Seed and Berry LLP
STREET: 6300 Columbia Center, 701 Fifth Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

COMPUTER READABLE FORM:
MEDIUM TYPE: PIOPDY disk
COMPUTER: IBM PC COMPatible
OPERAING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/336,708A
FILNG DATE:
CLASSIFICATION: 435
ATTORNEY/AGANT INFORMATION:
NAMM: Oleski, Nancy
REFERENCE/DOCKET NUMBER: A-241A
INFORMATION FOR SEQ ID NO: 9:
SEQUENCE CHARACTERISTICS:
LENGTH: 644 mmino acids
TYPE: amino acid
STRANDEDNESS: single
              Sequence 9, Application US/08336708A
Patent No. 5521295
GENERAL INFORMATION:
APPLICANT: Pacifici, Robert E.
APPLICANT: Thomason, Arlen R.
APPLICANT: Charg, Ming-Shi
TITLE OF INVENTION: Hybrid Receptor Molecules
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:

Sequence 4, Application US/08475352
Sequence 4, Application US/08475352
Patent No. 5916755
GENERAL INFORMATION:
APPLICANT: Kraus, Matthias H.
APPLICANT: Aaronson, Stuart A.
TITLE OF INVENTION: AN ISOLATED POLYPEPTIDE RELATED TO THE
TITLE OF INVENTION: BIDERMAL GROWTH FACTOR RECEPTOR, ANTIGEN THERETO, AND
TITLE OF INVENTION: BIOASSAYS AND METHODS RELATED THERETO
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Suite 400
